Freedom Technologies

Track all your Oil and Gas assets and Safety Equipment using 2D barcodes with a cell phone enabled mobile computer and integrated 2D barcode reader!

Finally, a way to label things with a barcode that will never fall off, <u>ever</u>!

Forget trying to make barcode labels stay on your assets and safety equipment! We use 2D Direct Part Marking (DPM) instead of barcodes to identify things. The 2D DPM barcode is permanently imprinted ***into*** the surface of an asset so that it can never fall off and can be read anytime with a special reader, even it is damaged significantly. The U.S. Dept. of Defense, the Auto Industry and others have been using this technology for years to permanently barcode and identify things.

2D Direct Part Mark into a metal surface

All in one Mobile Computer,
Cell Phone and Barcode Reader

Collect asset data, browse Internet, make cell calls – connect to databases, get emails, anywhere at anytime!

Wireless Mobile Computer/Reader from Zebra Technologies is the world's first fully mobile 2D DPM reader utilizing Wireless 802.11 a/b/g Wi Fi technologies, batch data collection and **Cell Phone capability!**

Industrial strength mobile computer/cell phone/reader for Field Applications!

The Zebra mobile reader is a very durable industrial strength wireless mobile handheld computer. Forget laptops that are unwieldy and prone to damage. Use one device to do it all: read barcodes, get email, collect information and send to your home base. Connect to your Corporate database via cell connection while in the field, scan 2D DPM codes, report information in real time or batch to your database. Track asset location, calibrations, tests, inventory, etc. Each item has a unique serial number inside the barcode so that each asset is tracked individually. Use for field equipment, assets and safety equipment tracking or anything that needs to be tracked.

Freedom's Error Proof software allows you to collect information from a remote location and send to your Corporate database in real time or in batch mode.

Collect Information:
Go to a site, connect to Freedom Error Proof software or your favorite database via cell call to web, scan 2D DPM barcode, enter information desired, hit send and data is sent to office immediately!

Browse asset information in real time:
Scan 2D DPM barcode, connect to Freedom Error Proof software via cell and display asset information such as last test date, last test results, next test due, current location, current lessee, contract information, current inventory, etc.

ADD GPS
Freedom now offers a GPS add on Zebra readers. The feature is handy for reading a barcode or DPM in the field and automatically capturing where the item is via GPS location.

About Freedom Technologies
Freedom Technologies has been in business since 1991 providing software solutions to the Automotive Industry, the Department of Defense, Aero Space, Medical and Petro Chemical Industries. Freedom has over 600 installed sites worldwide.

For a more information on the 2D DPM Marking, the Zebra mobile readers or information on Freedom Error Proof Software, please contact John Piatek at Freedom Technologies at 1-810-623-0346 or via Email at
