

Server Configuration

Freedom Technologies has developed the following standards regarding server configuration. Freedom Technologies deems that the following minimum server configuration is for Low Volume Transactions and will provide users with satisfactory performance. Freedom Technologies' recommended configuration is for Medium to High Volume Transactions and will provide users the best overall performance.

Hardware

Minimum:

- Processor Speed: Dual 2 GHz
- 4GB RAM
 - RAM Calculation (15MB of RAM will be used for each Telnet or HTTP Session). For example
80 sessions * 15MB of RAM = 1.2GB of RAM
- RAID Drive
- Uninterrupted Power Supply (UPS)
- Daily Backups

Recommended:

- 8 GB RAM or more
- RAID Drive
- Uninterrupted Power Supply (UPS)
- Daily Backups

Software

Minimum:

- Windows 2005 Server with the Latest Service Pack, Latest High Priority/Critical Updates and Software/Windows Updates installed
- SQL Server 2005 Express Latest Service Pack installed

Recommended:

- Windows 2008 R2 Server 64 bit or later with the Latest Service Pack, Latest High Priority/Critical Updates and Software/Windows Updates installed
- SQL Server 2008 or later Latest Service Pack Installed

Note: These standards are based solely on having a dedicated server. Please alert Freedom Technologies to any additional applications, which could impact the requirements.
